ECG

Code	Description
AMM00A50	Blue Sensor Electrode M Polymer 4mm Ambu 50/Pouch

Product Features:

• The Blue Sensor Electrode features wet gel, offset connector and suitable adhesion to ensure stable signal quality during short-term applications. Thanks to the occlusive backing material, the electrode is resistant to liquids.

• Offset connector mitigates the impact on signal quality from external forces like pulling of lead wires and pressure on electrodes

• Offset connector allows the user to connect and disconnect the lead wire without applying pressure to the patient or the sensor area, which reduces the risk of gel spreading and adhesive detachment from skin

• Conductive wet gel lowers skin impedance effectively and immediately

• Wet gel optimises contact between skin and electrode

• Adhesive is gentle to the skin and suitable for short-term application

• Occlusive backing material is resistant to liquid

• Ag/AgCl sensor ensures stable signal quality

• Visible release liner can help prevent medical accidents for both users and patients

Code	Description
AMR00S/10	Ambu BlueSensor R Electrode, Foam Wet Gel 48mm – Pack/10

Product Features:

• The BlueSensor Electrode contains an offset connector which allows for movement of the connected cable without affecting the electrodes performance

• The sensor also has a double ring adhesive which allows mounting without skin preparation and comfortable removal of electrodes, with a foam backing further increasing comfortability

• The wet gel used optimises contact between skin and electrode, lowering skin impedance to obtain the best possible signal

• The pure silver filament used ensures excellent trace quality due to optimised conversion of the signal from biological to electrical
